SUMMARY

Hello! My name is Juan Antonio Vivaldy Saragih and I enjoy creating things that live on the internet. My interest in web development started back in 2017 when I decided to join the website club at my highschool and make my own portfolio website with HTML & CSS!

Fast-forward to today, and I've had the privilege of working at Brighton, Tokohardware and Dealjava. My main focus right now is building and developing accessible and inclusive websites and new experiences for users. I also recently launched a course that covers everything you need to build a web app using Laravel & React.

EXPERIENCE

Front End Web Developer   07/2022 - Present
Dealjava

- Develop new web interface features and responsive website for users
- Maintaining and creating reusable components in React JS & Vue JS
- Develop and migrate the websites from Vue JS to React JS
- Designing and develop the admin site with user friendly web applications
- Designing a framework to create user applications that fit the needs of the company such as client side state management (Redux or Vuex)
- Review application and feature front-end libraries and plan future use upgrades with the development team
- Designing REST APIs using best practices methods in order to provide the best performance

Web Developer and UI/UX Designer   07/2021 - 06/2022
Tokohardware

- Designing a website with a UI that matches the content
- Manage the website hosting for website maintenance
- Work with a variety of different languages, platforms, frameworks, and base front end development technologies such as HTML5, CSS3, JavaScript, React, Vue, and WordPress
- Manually tested sites in various browsers and mobile devices to ensure cross-browser compatibility and responsiveness

Front End Web Developer and Design Graphic   03/2021 - 06/2021
Brighton

- Design content for wedding invitations, packaging and offsets
- Create and manage company website
- Create a website for wedding invitations from clients
- Designing content on social media
